

Timeslips Conversion to Abacus

What We'll Do:

We will convert your Timeslips clients into Abacus in a smooth, one time session, guaranteeing your satisfaction. Our data conversion expert will work with you during the process to ensure all your critical data is converted and set-up in Abacus so you can continue working with minimal interruption.

How Much Does it Cost?

\$750 for the entire process. For databases with over 10,000 records we charge an additional \$250 for each additional set of 5,000 records.

How Does it Work?

We access your computer On-Line and export clients from Timeslips to a CSV file. We then format, clean, and prepare that file for importing. We then create "Abacus Matters" including captions and matter numbers for each Timeslips client and create "Abacus Contacts" from each client. This constitutes the number of records imported.

How Long Will It Take?

We'll access your system remotely and perform the data conversion in one session. The process usually takes 3-4 hours depending on volume.
